

Dear Tenant/s with Gas Appliances,

- Have your gas appliances inspected regularly by So Cal Gas Company at least every year. Not performing regular maintenance may result in inefficient appliance operation, and in some cases, dangerous exposure to carbon monoxide.
- Keep the range top, oven and broiler top areas clean of grease. Grease is flammable and excessive build-up may result in a fire.
- DO NOT Install aluminum foil in the oven or range top. This can restrict circulation openings which can result in producing carbon monoxide.
- DO NOT Store items near a natural gas appliance that could interfere with manufacturer recommended airflow.
 - Keep clearance around water heaters, wall heaters, and all appliances to allow for proper airflow.
- Clean vents regularly to prevent lint and dust build up.
